The location of this BM at the Pôhono Bridge could be pinpointed quite accurately, and there is no BM at the described location. It was probably destroyed during road improvements.

NEWARKS OF REVISED DESCRIPTION:	
It is stamped "1213+01.92 121 the cap that was used for this	in exactly the described location. 3+00.83 5130.81 1936"". I believe BM in 1934 was destroyed and replaced 943 the C&GS used the 1936 cap as a of 5051.768 ft.
I believe the USGS BM is destro	yed.

There are no clues to tell where the old trail into Yosemite Valley was. The description does not even state on which side of the river the trail was. Assuming the current highway followed the general route of the old trail, the area around the BM elevation was searched, but no sign of the trail or the BM could be found.

The iron pipe and cap were found at the described location, but they are located in a ditch and have obviously been hit and bent by road working equipment. The pipe is solid in the ground, but bent at a distinct angle. The elevation is gone.
